CU Reagent

CU reagent is a component of BCA Protein Assay. The method utilizes the reduction of the copper cation (Cu2+) to the cuprous cation (Cu+) by protein in an alkaline medium. The generated Cu+ forms an intensely purple-colored complex with the BCA reagent (bicinchoninic acid) with a very strong absorbance at 562nm.

Catalog No.	501107
Size	100mL / 500mL
Product Category	Protein Detection
Storage/Stability	Ambient/1 year
Shipping	Ambient
