

## Hydroxyl Free Radical Scavenging Capacity Assay kit

---

Hydroxyl free radicals act on biological molecules such as proteins, nucleic acids, and lipids in the body, causing damage to cell structure and function, leading to metabolic disorders in the body and causing diseases. Hydroxyl radical scavenging ability is one of the important indicators of the antioxidant capacity of samples, and it has been widely used in the research of antioxidant health products and drugs.

H<sub>2</sub>O<sub>2</sub>/Fe<sup>2+</sup> generates hydroxyl radicals through the Fenton reaction, which oxidizes Fe<sup>2+</sup> in the o-phenanthroline-Fe<sup>2+</sup> aqueous solution to Fe<sup>3+</sup>, resulting in a decrease in the absorbance at 536nm. The sample inhibits the rate of decrease in absorbance at 536nm, reflecting the sample's removal of hydroxyl radicals Ability.

Catalog No.	250132
Size	50 Assays / 100 Assays
Product Category	Enzymatic / Metabolic Assay
Detection Method	Visible spectrophotometry
Storage/Stability	2 ~ 8°C/1 year
Shipping	Gel Packs
