

## Soil Dehydrogenase Activity Assay kit

---

The activity of soil dehydrogenase (sDHA) can reflect the amount of active microorganisms in the soil system and its degradation activity to organic matter, and can be used as an indicator of the degradation performance of soil microorganisms.

Hydrogen receptor 2, 3, 5-Triphenyl Tetrazolium Chloride (TTC) is reduced to triphenylmethyl pyrene after receiving hydrogen during cell respiration (Triphenyl Formazone, TF), TF is red and has a maximum absorption peak at a wavelength of 485nm. Using spectrophotometry to measure its absorbance at 485nm, the soil dehydrogenase activity can be obtained.

Catalog No.	251039
Size	50 Assays / 100 Assays
Product Category	Soil Assay
Detection Method	Visible spectrophotometry
Storage/Stability	2-8°C/1 year
Shipping	Gel Packs
