

CD158b1 blocking peptide

Blocking peptide binds specifically to the target antibody and block undesirable antibody binding. This occurs because the peptide resembles the epitope for which the antibody is specific, therefore, the antibody binds to the blocking peptide are no longer able to bind to the epitope in the protein.

Pre-adsorption with blocking peptide greatly improves the results and it is extremely useful in immunohistochemistry (IHC) or in Western blotting (immunoblotting) when non-specific binding is an issue.

This peptide is recommended to block anti-CD158b1 Antibody (Catalog no. 4071653) reactivity

Directions for Use: Blocking Peptide to the diluted primary antibody in a molar ratio of 10:1 (peptide to antibody) and incubate the mixture at 4°C for overnight or at room temperature for 2 hours

Catalog No.	5071653
Size	1mg
Product Category	Blocking Peptide
Gene Symbol	KIR2DL2
UniProt ID	P43627
Purity	>85%
Synonyms	CD158B1; NKAT6; Killer cell immunoglobulin-like receptor 2DL2; CD158 antigen-like family member B1; MHC class I NK cell receptor; Natural killer-associated transcript 6; NKAT-6; p58 natural killer cell receptor clone CL-43; p58 NK receptor CL-43; CD158b1
Storage/Stability	-20°C/1 year
