

PRAS40 (pT246) blocking peptide

Blocking peptide binds specifically to the target antibody and block undesirable antibody binding. This occurs because the peptide resembles the epitope for which the antibody is specific, therefore, the antibody binds to the blocking peptide are no longer able to bind to the epitope in the protein.

Pre-adsorption with blocking peptide greatly improves the results and it is extremely useful in immunohistochemistry (IHC) or in Western blotting (immunoblotting) when non-specific binding is an issue.

This peptide is recommended to block anti-PRAS40 (pT246) Antibody (Catalog no. 4074332) reactivity

Directions for Use: Blocking Peptide to the diluted primary antibody in a molar ratio of 10:1 (peptide to antibody) and incubate the mixture at 4°C for overnight or at room temperature for 2 hours

Catalog No.	5174332
Size	1mg
Product Category	Blocking Peptide
Gene Symbol	AKT1S1
UniProt ID	Q96B36
Purity	>85%
Synonyms	PRAS40; Proline-rich AKT1 substrate 1; 40 kDa proline-rich AKT substrate
Storage/Stability	-20°C/1 year
Shipping	Gel Packs
