

WIPI1 blocking peptide

Blocking peptide binds specifically to the target antibody and block undesirable antibody binding. This occurs because the peptide resembles the epitope for which the antibody is specific, therefore, the antibody binds to the blocking peptide are no longer able to bind to the epitope in the protein.

Pre-adsorption with blocking peptide greatly improves the results and it is extremely useful in immunohistochemistry (IHC) or in Western blotting (immunoblotting) when non-specific binding is an issue.

This peptide is recommended to block anti-WIPI1 Antibody (Catalog no. 4077398) reactivity

Directions for Use: Blocking Peptide to the diluted primary antibody in a molar ratio of 10:1 (peptide to antibody) and incubate the mixture at 4°C for overnight or at room temperature for 2 hours

Catalog No.	5077398
Size	1mg
Product Category	Blocking Peptide
Gene Symbol	WIPI1
UniProt ID	Q5MNZ9
Purity	>85%
Synonyms	WIPI49; WD repeat domain phosphoinositide-interacting protein 1; WIPI-1; Atg18 protein homolog; WD40 repeat protein interacting with phosphoinositides of 49 kDa; WIPI 49 kDa
Storage/Stability	-20°C/1 year
Shipping	Gel Packs
