

Poly-L-Lysine [10x]

The nature of the surface of the culture flask is crucial for cell culture. The glycoprotein (negative) on the cell surface is easily adsorbed on the hydrophilic surface, so that if the cell culture surface has a considerable amount of positive charge. The use of polylysine to optimize cell culture surfaces can promote cell adsorption.

Catalog No.	523028
Size	10mL
Product Category	Cell Culture Reagent
Storage/Stability	-20°C/2 years
Shipping	Gel Packs
