

Formalin Fixative [10%]

The purpose of fixation is to preserve the original morphological structure of cells and tissues, and the fixative can prevent endogenous lysosomal enzymes from autolyzing their own tissues and cells, and inhibit the growth of bacteria and molds. The fixative changes the internal structure of the protein by coagulation, formation of additive compounds, etc., thereby inactivating the enzyme.

Formalin fixative is composed of formaldehyde and deionized water, which is suitable for fixing most tissues.

Catalog No.	505051
Size	500mL / 5L
Product Category	Immuno Reagent
Storage/Stability	2 ~ 8°C/1 year
Shipping	Ambient
