

VB7 (Vitamin B7) ELISA kit

This kit applies competitive inhibition ELISA method for the quantitative detection of VB7 (Vitamin B7) in various species samples. The microtiter plate provided in this kit has been pre-coated with VB7 protein. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to VB7. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of VB7 in the samples is then determined by comparing the OD of the samples to the standard curve.
