

Bovine TSP-1 (Thrombospondin-1) ELISA kit

This kit applies sandwich ELISA method for the quantitative detection of TSP-1 (Thrombospondin-1) in bovine samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Cattle TSP-1. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Cattle TSP-1. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Cattle TSP-1, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Cattle TSP-1 in the samples is then determined by comparing the OD of the samples to the standard curve.

Catalog No.	3125945
Size	96-Wells
Product Category	ELISA (Quantitative)
Reactivity	Bovine
Sample	Serum; Plasma
Assay Method	Sandwich ELISA
Assay Duration	3.5 hours
Sensitivity	30 pg/mL
Standard Curve Range	78.13-5000 pg/mL
Storage/Stability	-20°C/1 year; 4°C/6 months
