

## Chicken LAMP1 (Lysosomal Associated Membrane Protein 1) ELISA kit

---

This kit applies sandwich ELISA method for the quantitative detection of LAMP1 (Lysosomal Associated Membrane Protein 1) in chicken samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Chicken LAMP1. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Chicken LAMP1. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Chicken LAMP1, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$ 10nm. The concentration of Chicken LAMP1 in the samples is then determined by comparing the OD of the samples to the standard curve.
