

Human aCTx (alpha-Crosslaps) ELISA kit

This kit applies competitive inhibition ELISA method for the quantitative detection of aCTx (alpha-Crosslaps) in human samples. The microtiter plate provided in this kit has been pre-coated with Human aCTx protein. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Human aCTx. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Human aCTx in the samples is then determined by comparing the OD of the samples to the standard curve.

Catalog No.	3014853
Size	96-Wells
Product Category	ELISA (Quantitative)
Reactivity	Human
Sample	Serum; Plasma; Tissue Homogenates; Other Biological Fluids
Assay Method	Competitive Inhibition ELISA
Assay Duration	2 hours
Sensitivity	25.3 pg/mL
Standard Curve Range	78.13-5000 pg/mL
Storage/Stability	-20°C/1 year; 4°C/6 months
