

## Human anti-CarP (anti-carbamylated protein) ELISA kit

---

This kit applies sandwich ELISA method for the quantitative detection of anti-CarP (anti-carbamylated protein) in human samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Human anti-CarP. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Human anti-CarP. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Human anti-CarP, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$ 10nm. The concentration of Human anti-CarP in the samples is then determined by comparing the OD of the samples to the standard curve.

Catalog No.	3019238
Size	96-Wells
Product Category	ELISA (Quantitative)
Reactivity	Human
Sample	Serum; Plasma; Other Biological Fluids
Assay Method	Sandwich ELISA
Assay Duration	3.5 hours
Sensitivity	0.32 ng/mL
Standard Curve Range	0.79-50 ng/mL
Storage/Stability	-20°C/1 year; 4°C/6 months
