

Human FPB (Fibrinopeptide B) ELISA kit

This kit applies competitive inhibition ELISA method for the quantitative detection of FPB (Fibrinopeptide B) in human samples. The microtiter plate provided in this kit has been pre-coated with Human FPB protein. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Human FPB. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Human FPB in the samples is then determined by comparing the OD of the samples to the standard curve.

Catalog No.	3015168
Size	96-Wells
Product Category	ELISA (Quantitative)
Reactivity	Human
Sample	Serum; Plasma
Assay Method	Competitive Inhibition ELISA
Assay Duration	2 hours
Sensitivity	162.7 pg/mL
Standard Curve Range	468.75-30000 pg/mL
Storage/Stability	-20°C/1 year; 4°C/6 months
