

Mouse PAFAH2 (Platelet Activating Factor Acetylhydrolase 2) ELISA kit

This kit applies sandwich ELISA method for the quantitative detection of PAFAH2 (Platelet Activating Factor Acetylhydrolase 2) in mouse samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Mouse PAFAH2. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Mouse PAFAH2. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Mouse PAFAH2, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Mouse PAFAH2 in the samples is then determined by comparing the OD of the samples to the standard curve.
