

Mouse PK2 (Prokineticin 2) ELISA kit

This kit applies competitive inhibition ELISA method for the quantitative detection of PK2 (Prokineticin 2) in mouse samples. The microtiter plate provided in this kit has been pre-coated with Mouse PK2 protein. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Mouse PK2. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Mouse PK2 in the samples is then determined by comparing the OD of the samples to the standard curve.
