

## Mouse PPAR $\gamma$ C1a (Peroxisome Proliferator Activated Receptor gamma Coactivator 1 alpha) ELISA kit

---

This kit applies sandwich ELISA method for the quantitative detection of PPAR $\gamma$ C1a (Peroxisome Proliferator Activated Receptor gamma Coactivator 1 alpha) in mouse samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Mouse PPAR $\gamma$ C1a. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Mouse PPAR $\gamma$ C1a. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Mouse PPAR $\gamma$ C1a, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$ 10nm. The concentration of Mouse PPAR $\gamma$ C1a in the samples is then determined by comparing the OD of the samples to the standard curve.
