

## Porcine IFN $\gamma$ (Interferon gamma) ELISA kit

---

This kit applies sandwich ELISA method for the quantitative detection of IFN $\gamma$  (Interferon gamma) in porcine samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Pig IFN $\gamma$ . Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Pig IFN $\gamma$ . Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Pig IFN $\gamma$ , biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$ 10nm. The concentration of Pig IFN $\gamma$  in the samples is then determined by comparing the OD of the samples to the standard curve.

Catalog No.	3211220
Size	96-Wells
Product Category	ELISA (Quantitative)
Reactivity	Porcine
Sample	Serum; Plasma; Tissue Homogenates; Cell Lysates; Cell Culture Supernates; Other Biological Fluids
Assay Method	Sandwich ELISA
Assay Duration	3.5 hours
Sensitivity	2.8 pg/mL
Standard Curve Range	7.82-500 pg/mL
Storage/Stability	-20°C/1 year; 4°C/6 months
