

Rabbit APOE (Apolipoprotein E) ELISA kit

This kit applies competitive inhibition ELISA method for the quantitative detection of APOE (Apolipoprotein E) in rabbit samples. The microtiter plate provided in this kit has been pre-coated with Rabbit APOE protein. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Rabbit APOE. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Rabbit APOE in the samples is then determined by comparing the OD of the samples to the standard curve.

Catalog No.	3222024
Size	96-Wells
Product Category	ELISA (Quantitative)
Reactivity	Rabbit
Sample	Serum; Plasma; Other Biological Fluids
Assay Method	Competitive Inhibition ELISA
Assay Duration	2 hours
Sensitivity	182.5 pg/mL
Standard Curve Range	625-40000 pg/mL
Storage/Stability	-20°C/1 year; 4°C/6 months
