

Rabbit NT-ProBNP (N-Terminal Pro-Brain Natriuretic Peptide) ELISA kit

This kit applies sandwich ELISA method for the quantitative detection of NT-ProBNP (N-Terminal Pro-Brain Natriuretic Peptide) in rabbit samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Rabbit NT-ProBNP. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Rabbit NT-ProBNP. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Rabbit NT-ProBNP, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Rabbit NT-ProBNP in the samples is then determined by comparing the OD of the samples to the standard curve.
