

Rabbit PF4 (Platelet Factor 4) ELISA kit

This kit applies sandwich ELISA method for the quantitative detection of PF4 (Platelet Factor 4) in rabbit samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Rabbit PF4. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Rabbit PF4. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Rabbit PF4, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Rabbit PF4 in the samples is then determined by comparing the OD of the samples to the standard curve.

Catalog No.	3221864
Size	96-Wells
Product Category	ELISA (Quantitative)
Reactivity	Rabbit
Sample	Serum; Platelet-Poor Plasma
Assay Method	Sandwich ELISA
Assay Duration	3.5 hours
Sensitivity	0.119 ng/mL
Standard Curve Range	0.32-20 ng/mL
Storage/Stability	-20°C/1 year; 4°C/6 months
