

Rat OVA sIgE (ovalbumin specific IgE) ELISA kit

This kit applies sandwich ELISA method for the quantitative detection of OVA sIgE (ovalbumin specific IgE) in rat samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Rat OVA sIgE. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Rat OVA sIgE. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Rat OVA sIgE, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Rat OVA sIgE in the samples is then determined by comparing the OD of the samples to the standard curve.

Catalog No.	3039176
Size	96-Wells
Product Category	ELISA (Quantitative)
Reactivity	Rat
Sample	Serum; Plasma
Assay Method	Sandwich ELISA
Assay Duration	3.5 hours
Sensitivity	0.125 ug/ml
Standard Curve Range	0.312-20 ug/ml
Storage/Stability	-20°C/1 year; 4°C/6 months
