

## Rat PPAR $\gamma$ C1 $\alpha$ (Peroxisome Proliferator Activated Receptor gamma Coactivator 1 alpha) ELISA kit

---

This kit applies sandwich ELISA method for the quantitative detection of PPAR $\gamma$ C1 $\alpha$  (Peroxisome Proliferator Activated Receptor gamma Coactivator 1 alpha) in rat samples. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Rat PPAR $\gamma$ C1 $\alpha$ . Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Rat PPAR $\gamma$ C1 $\alpha$ . Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Rat PPAR $\gamma$ C1 $\alpha$ , biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$ 10nm. The concentration of Rat PPAR $\gamma$ C1 $\alpha$  in the samples is then determined by comparing the OD of the samples to the standard curve.

Catalog No.	3036194
Size	96-Wells
Product Category	ELISA (Quantitative)
Reactivity	Rat
Sample	Tissue Homogenates; Cell Lysates; Other Biological Fluids
Assay Method	Sandwich ELISA
Assay Duration	3.5 hours
Sensitivity	0.127 ng/mL
Standard Curve Range	0.32-20 ng/mL
Storage/Stability	-20°C/1 year; 4°C/6 months
