

## Rat PYY (Peptide YY) ELISA kit

---

This kit applies competitive inhibition ELISA method for the quantitative detection of PYY (Peptide YY) in rat samples. The microtiter plate provided in this kit has been pre-coated with Rat PYY protein. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Rat PYY. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$ 10nm. The concentration of Rat PYY in the samples is then determined by comparing the OD of the samples to the standard curve.
