

Human Receptor II for the Fc Fragment of IgG (FcgammaR II/CD32) Rapid ELISA kit

This Rapid ELISA kit applies Sandwich enzyme immunoassay technique for the quantitative detection. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human FcgammaR II/CD32. Standards or samples are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Human FcgammaR II/CD32 and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human FcgammaR II/CD32, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm \pm 2 nm. The OD value is proportional to the concentration of Human FcgammaR II/CD32. You can calculate the concentration of Human FcgammaR II/CD32 in the samples by comparing the OD of the samples to the standard curve.

Catalog No.	3522017
Size	96-Well Tests
Product Category	Rapid ELISA
Reactivity	Human
Sample	Serum; Plasma; Tissue Homogenate; Other Biological Samples
Assay Method	Sandwich ELISA
Assay Duration	1.5H
Sensitivity	28.13 pg/mL
Standard Curve Range	46.88-3000 pg/mL

Storage/Stability

-20°C/1 year; 4°C/6 months
