

REALcut™ NotI

REALcut™ enzymes are a series of engineered restriction enzymes that are capable of fast DNA digestion; the enzymes are able to digest DNA in 5~15 minutes. This enables any combination of restriction enzymes to work simultaneously in one reaction tube and eliminates the need for sequential digestions. All REALcut™ enzymes have passed multiple strict quality controls, and can be used to digest plasmid, genomic and viral DNA as well as PCR products.

REALcut™ enzymes show superior activity in the Universal buffer and Color buffer, supplied with all the enzymes. The Color Buffer includes a density reagent along with red and yellow tracking dyes that allow for direct loading of the reaction mixtures on a gel. The red dye of the Color Buffer migrates with 2.5 kb double-strand DNA fragments in a 1% agarose gel, and the yellow dye migrates with 10bp double-strand DNA fragments in a 1% agarose gel.

|-------------------|---------------------|
| Catalog No. | 516047 |
| Size | 50 rxns |
| Product Category | Restriction Enzymes |
| Isoschizomers | CciNI |
| Cut Site | GCGGCCGC |
| Total Units | 1000U |
| Concentration | 20U/uL |
| Total Volume | 50uL |
| Reaction Volume | 1uL/Rxn |
| Storage/Stability | -20°C/1 year |
| Shipping | Gel Packs |
