

## REALcut<sup>TM</sup> StuI

REALcut<sup> $\dagger$ </sup> enzymes are a series of engineered restriction enzymes that are capable of fast DNA digestion; the enzymes are able to digest DNA in 5~15 minutes. This enables any combination of restriction enzymes to work simultaneously in one reaction tube and eliminates the need for sequential digestions. All REALcut<sup> $\dagger$ </sup> enzymes have passed multiple strict quality controls, and can be used to digest plasmid, genomic and viral DNA as well as PCR products.

REALcut™ enzymes show superior activity in the Universal buffer and Color buffer, supplied with all the enzymes. The Color Buffer includes a density reagent along with red and yellow tracking dyes that allow for direct loading of the reaction mixtures on a gel. The red dye of the Color Buffer migrates with 2.5 kb double-strand DNA fragments in a 1% agarose gel, and the yellow dye migrates with 10bp double-strand DNA fragments in a 1% agarose gel.

Catalog No.	516069
Size	100 rxns
Product Category	Restriction Enzymes
Isoschizomers	Eco147I, Pcel, SseBI
Cut Site	AGGCCT
Total Units	1000U
Concentration	10U/uL
Total Volume	100uL
Reaction Volume	1uL/Rxn
Sotrage/Stability	-20°C/1 year
Shipping	Gel Packs
