

DNA Purification Magnetic Beads

This kit isolates nucleic acids and other biomolecules directly from a crude sample, and from a variety of different types of sample, with minimal processing.

The uniquely embedded magnetic beads have a strong affinity for nucleic acids under certain conditions, and when the conditions change, the magnetic beads release adsorbed nucleic acids, which can achieve the purpose of rapid isolation and purification of nucleic acids.

This kit optimized for DNA purification such as the purification of PCR amplification products. (This kit also applies to RNA purification such as the purification of T7 RNA polymerase transcript products.)

Catalog No.	519401
Size	
Product Category	Isothermal Amplification
Pack Size	100 rxns
Storage/Stability	2 ~ 8°C/1 year (Protect from moisture and direct sunlight)
Shipping	Ambient
