

DNA Extraction & Purification Kit (magnetic beads based)

This kit utilize magnetic bead-based technology, allowing for highly efficient nucleic acid isolation from a variety of samples.

The uniquely embedded magnetic beads have a strong affinity for nucleic acids under certain conditions, and when the conditions change, the magnetic beads release adsorbed nucleic acids, which can achieve the purpose of rapid isolation and purification of nucleic acids.

This kit optimized for DNA extraction, enrichment, and purification. For example, extrac genomic DNA from bacteria or cells.

Catalog No.	519402
Size	
Product Category	Isothermal Amplification
Pack Size	50 rxns
Storage/Stability	2 ~ 8°C/1 year (Protect from moisture and direct sunlight)
Shipping	Ambient
