

BSA [5mg/ml]

BSA standard is a high-quality calibrator, widely used for total protein determination experiments to establish a standard curve and calibration control. BSA is generally recognized as a calibration protein for total protein quantification. This standard can be used as a protein concentration calibration standard in BCA, Bradford or other protein determination experiments.

Catalog No.	501104
Size	1mL / 10mL
Product Category	Protein Detection
Storage/Stability	-20°C/1 year
Shipping	Gel Packs
