

Endogenous Biotin Blocking Solution

Endogenous biotin is widely distributed in mammalian tissues, especially in liver, lung, spleen, fat, brain and other tissues. After formalin fixation, the endogenous background will be reduced, but the background in the frozen section will be greatly enhanced. Violent antigen retrieval exposes the endogenous substances in the formalin-fixed tissue, such as endogenous biotin. The biotin blocking solution can well inhibit the activity of endogenous substances (mainly endogenous biotin).

Catalog No.	506205
Size	100mL
Product Category	Immunoreagent
Storage/Stability	2 ~ 8°C/1 year
Shipping	Gel Packs
