

Formalin Calcium Fixative

The purpose of fixation is to preserve the original morphological structure of cells and tissues, and the fixative can prevent endogenous lysosomal enzymes from autolyzing their own tissues and cells, and inhibit the growth of bacteria and molds. The fixative changes the internal structure of the protein by coagulation, formation of additive compounds, etc., thereby inactivating the enzyme.

Formalin Calcium fixative is composed of calcium acetate and formalin. It is suitable for the fixation of most tissues, especially for adipose tissue, which has a good fixation and preservation effect.

Catalog No.	506508
Size	500mL
Product Category	Immunoreagent
Storage/Stability	2 ~ 8°C/1 year
Shipping	Ambient
