

ALP

Catalog No.	505003
Size	1000U
Product Category	Immuno Substrate
Storage/Stability	Alkaline phosphatase (ALP) plays a dual role in immunology: it's used as a reporter enzyme in immunoassays to detect biomarkers due to its high catalytic activity, and it functions as an endogenous anti-inflammatory protein. As a reporter, ALP-conjugated antibodies or antigens amplify signals, increasing test sensitivity.
Shipping	2 ~ 8°C / 1 year
