

## Rabbit anti-BSA

The serum obtained by immunizing a host animal is called immune serum or antiserum. This process involves introducing an antigen (the immunogen) into the animal, which then triggers an immune response, leading to the production of antibodies against the antigen. The serum, collected by bleeding the animal, contains these antibodies and can be used for various applications, such as transferring passive immunity or in research and diagnostic tests.

The appearance of this product is reddish transparent liquid, containing 0.01% NaN3 for corrosion protection.

Catalog No.	418263
Size	0.5mL
Product Category	Immune Serum
Immunogen	BSA
Host	Rabbit
Application	BSA
Recommended Dilutions	WB; ELISA; Double Immunodiffusion
Storage/Stability	WB: 1:2000-20000; EIA: 1:2000-50000; ID: 1:8-64
Shipping	-20°C/1 year
