

TriColor Prestained Protein Ladder

[14-250 Kda; 11 bands; 5uL/well]

This Protein Ladder is a three-color, ready-to-use molecular weight standard for proteins, featuring 11 pre-stained recombinant proteins that span a molecular weight range of 14 to 250 kDa. The loading buffer has been pre-mixed for use in SDS-PAGE or Western Blot, facilitating the visualization of electrophoretic protein separation in SDS-PAGE and assessing the membrane transfer efficacy in Western Blot.

After SDS-PAGE gel electrophoresis or Western blot transfer, 11 pre-stained bands of 14, 17, 20, 25, 30, 43, 50, 72, 100, 130, 250 kDa can be observed. The 25 kDa band appears in green, and the 72 kDa band appears in orange-red, whereas the remaining 9 bands appearing blue.
