

TriColor Prestained Protein Ladder

[5 ~ 245kDa; 13 bands; 5uL/well]

This Protein Ladder is a three-color, ready-to-use molecular weight standard for proteins, featuring 13 pre-stained recombinant proteins that span a molecular weight range of 5 to 245 kDa. The loading buffer has been pre-mixed for use in SDS-PAGE or Western Blot, facilitating the visualization of electrophoretic protein separation in SDS-PAGE and assessing the membrane transfer efficacy in Western Blot.

After SDS-PAGE gel electrophoresis or Western blot transfer, 13 pre-stained bands of 5, 11, 17, 20, 25, 35, 48, 63, 75, 100, 135, 185, 245 kDa can be observed. The 25 kDa band appears in green, and the 75 kDa band appears in orange-red, whereas the remaining 11 bands appearing blue.

Catalog No.	502002
Size	250uL
Product Category	Protein Ladder
Storage/Stability	-20°C/1 year
Shipping	Gel Packs
