

IHC Double staining kit (anti-Mouse IgG/HRP + anti-Rabbit IgG/AP)

Double Stain Kit is specifically designed for IHC and other immunological assays, enabling the simultaneous detection of two target antigens. It employs the classic DAB and AP chromogenic systems to achieve dual-signal labeling. The chromogenic products are stable and suitable for multiplex antigen detection in paraffin sections, frozen sections, and cellular samples. This kit is widely applied in pathological diagnosis, tumor research, and basic scientific research fields.

This kit contains HRP-labeled anti-mouse IgG and AP-labeled anti-rabbit IgG, is suitable for immunohistochemical experiments with primary antibodies of mouse and rabbit IgG.

The kit provides Blocking Solution (Normal Goat Serum), Endogenous Peroxidase Blocker, 50x concentrate of Secondary Antibodies, Diluent, HRP & AP conjugates.

Catalog No.	505008
Size	50 preps / 100 preps
Product Category	Immuno Detection
Storage/Stability	-20°C / 1 year
Shipping	Gel Packs
