

Universal Poly-HRP Detection (anti-rabbit /mouse IgG)

Universal Poly-HRP Detection (anti-rabbit /mouse IgG) is a improvised biotin-free polymerization technology to prepare super sensitive polymeric peroxidase linked conjugates; specifically designed for visualization of mouse and rabbit primary antibodies on human tissue. The reagent utilizes a novel controlled and compact enzyme polymerization technology to achieve higher sensitivity without background. The labeled polymer does not contain avidin or biotin, thus, non-specific staining caused by endogenous biotin is completely eliminated.

Universal Poly-HRP Labelled Detection System provides superior sensitivity and specificity, short incubation time and faster turnaround. The protocol is standardized for the paraffin-embedded tissue section, frozen tissue sections and cell preparations. It can also be used on an automated staining system.

Catalog No.	505010
Size	5mL / 10mL
Product Category	Immuno Detection
Storage/Stability	2 ~ 8°C/1 year
Shipping	Gel Packs
