

Mitochondrial Complex I Activity Assay kit

Mitochondrial Complex I (EC 1.6.5. 3), also known as NADH-CoQ reductase or NADH dehydrogenase, is widely present in the mitochondria of animals, plants, microorganisms and cultured cells, and is the largest protein in the inner mitochondrial membrane Complex. The enzyme catalyzes the transfer of a pair of electrons from NADH to CoQ, and at the same time reduces O₂ to O₂⁻, which is the main part of the respiratory electron transport chain that produces O₂⁻. Measuring the enzyme activity can not only reflect the state of the respiratory electron transport chain (ETC), but also reflect the state of reactive oxygen species (ROS) production.

Complex I can catalyze the dehydrogenation of NADH to generate NAD⁺. The oxidation rate of NADH is measured at 340nm to calculate the enzyme activity.

Catalog No.	250051
Size	50 Assays / 100 Assays
Product Category	Colorimetric Assay
Storage/Stability	-20°C/1 year
Shipping	Gel Packs
