

REAL-Prep™ rRNA Depletion Kit (Human/Mouse/Rat) (for Illumina)

REAL-Prep™ rRNA Depletion Kit (Human/Mouse/Rat) is suitable for total RNA samples of human, mouse, and rat, and can effectively remove rRNA from total RNA, including 28S, 18S, 5.8S, and 5S rRNA, and mitochondrial 16S and 12S rRNA. Retain mRNA as well as other non-coding RNAs. The resulting RNA can be used for mRNA and non-coding RNA (e.g., lncRNA) analysis.

The kit is suitable not only for total RNA samples with good integrity, but also for partially degraded RNA samples (e.g., FFPE RNA). The recommended input amount for Total RNA is 10ng-1ug.

Catalog No.	519122
Size	
Product Category	Next-Generation Sequencing
Pack Size	24 rxn / 96 rxn
Shipping	-20° C/ 6 months
