

DMSO (Cell culture Grade)

Dimethyl sulfoxide (DMSO) is often used to dissolve reagents; therefore it is known as “universal solvent”. DMSO is used as cell freezing media to protect cells from mechanical damage caused by ice crystals. It can also be used for the main culture, subculture, recombinant aneuploid, hybridoma and other cell lines, embryonic stem cells (ESC) and hematopoietic stem cells. Also often used in combination with BSA or FBS.

Catalog No.	523002
Size	50mL / 100mL
Product Category	Cell Culture Reagent
Storage/Stability	Ambient/3 years
Shipping	Ambient
