

Normal Chicken serum

Normal Chicken serum as a blocking agent or antibody diluent in immunoassays to reduce non-specific binding in techniques like ELISA and immunohistochemistry. It also serves as a negative control or reference in various immunological & serological studies.

While using, dilute the blocking serum stock solution 10 or 20 times with PBS (0.01mol/L pH7.2-7.4) to make a 10% or 5% working solution, and drop it directly on the tissue slice or cell smear. Incubate at 37°C for 10-30 minutes, remove the serum, do not wash, add dropwise primary antibody working solution diluted in appropriate proportions, incubate at 37°C for 1-2h or 4°C overnight.

Catalog No.	506026
Size	10mL
Product Category	Immuno Reagent
Storage/Stability	-20°C/5 years
Shipping	Gel Packs
