

Amylose Content Assay kit

Amylose is a polysaccharide chain linked by alpha-(1,4) glycosidic linkages of D-glucose. The content of amylose affects the eating quality and appearance quality of food, and food safety is closely related.

Amylose and iodine form a blue complex. Ethanol is used to separate the soluble sugar and starch in the sample, and then iodine is used to react with it to obtain the amylose content.

Catalog No.	250426
Size	50 Assays / 100 Assays
Product Category	Colorimetric Assay
Detection Method	Spectrophotometry / Micro-Plate Reader
Storage/Stability	2-8°C/1 year
Shipping	Gel Packs
