

Formaldehyde Dehydrogenase Activity Assay kit (Animal Samples)

Formaldehyde dehydrogenase exists in most prokaryotes and all eukaryotes. It is an oxidoreductase that converts formaldehyde. Formaldehyde dehydrogenase can catalyze formaldehyde and NAD⁺ to produce NADH. The absorbance at 340 nm will increase. By measuring the change at 340nm, the activity of formaldehyde dehydrogenase can be calculated.

Catalog No.	250498
Size	50 Assays / 100 Assays
Product Category	Colorimetric Assay
Detection Method	Spectrophotometry / Micro-Plate Reader
Storage/Stability	2-8°C/6 months
Shipping	Gel Packs
