

Serum-free Cell Freezing Medium (w/o DMSO; w/ Phenol Red)

Serum-free Cell Freezing Medium is a ready-to-use cryopreservation solution, free of serum and animal-derived proteins. Therefore, it not only reduces the risk of contamination from various bacteria, viruses, mycoplasma, etc., ensuring the safety of cryopreserved cells, but also minimizes the impact of exogenous proteins on normal cell growth and differentiation. Furthermore, no programmed cooling is required; cells can be stored long-term at -80°C, making it suitable for the cryopreservation of most mammalian cells.

Catalog No.	523103
Size	50mL / 100mL
Product Category	Cell Cryopreservative
Storage/Stability	2 ~ 8°C/1 year
Shipping	Gel Packs
