

Plant Lignin Activity Assay kit

Lignin is one of the components that make up plant cell walls and has the function of connecting cells. Lignin is present in wood tissue, and It forms an interwoven network to harden the cell wall and is the main component of the secondary wall.

The phenolic hydroxyl group in lignin has a characteristic absorption peak at 280nm after acetylation, and the absorbance at 280nm is positively correlated with the lignin content.

Catalog No.	251420
Size	50 Assays / 100 Assays
Product Category	Colorimetric Assay
Detection Method	Spectrophotometry / Micro-Plate Reader
Storage/Stability	2-8°C/1 year
Shipping	Gel Packs
