

Mycoplasma DNA Extraction & Purification Kit (Magnetic Bead-Based)

This kit is intended for the extraction, enrichment, and purification of nucleic acids from various sample types. This kit employs uniquely encapsulated magnetic beads and a proprietary buffer system for the extraction, enrichment, and purification of nucleic acids. The magnetic beads exhibit strong affinity for nucleic acids under specific binding conditions. When buffer conditions are altered, the beads release the adsorbed nucleic acids, enabling rapid separation and purification of target nucleic acids.

Catalog No.	400100
Size	50 preps / 100 preps
Product Category	Mycoplasma PCR
