

Hybridoma Cell Freezing Medium [w/ DMSO & FBS]

Hybridoma Cell Freezing Media are complete, ready to use reagents designed to protect and preserve cells during frozen storage. These media are a convenient and cost effective alternative to in-house freezing media and can be used for a wide variety of mammalian cells. The medium is formulated to contain 10% DMSO and fetal bovine serum. DMSO acts as a cryoprotectant and prevents formation of ice crystals and prevents cell damage. It is ready to use and does not require further addition of any other reagents.

This medium is optimized for cryopreservation of sensitive hybridoma cell lines. Users are advised to test the suitability of the medium for individual cell lines.

*The medium does not contain antibiotics.

Catalog No.	523167
Size	50mL
Product Category	Cell Freezing Media
Storage/Stability	-20°C/1 year
Shipping	Gel Packs
