

Plant Isocitrate Lyase Activity Assay kit

ICL (EC4.1.3.1) mainly exists in plants and microorganisms. During the germination process of oil crop seeds, the glyoxylic acid cycle and other processes convert fat into carbohydrates. ICL is one of the key enzymes in the glyoxylate cycle.

ICL catalyzes the degradation of isocitrate into glyoxylic acid and succinic acid. Glyoxylic acid and NADH generate ethanol and NAD under the action of LDH. NADH has a characteristic absorption peak at 340nm.

Catalog No.	251203
Size	50 Assays / 100 Assays
Product Category	Plant / Soil Assay
Detection Method	UV spectrophotometry
Storage/Stability	-20°C/1 year
Shipping	Gel Packs
