

Nuclear Extraction Kit

Nucleus extraction kit is used to separate complete and purified nuclei from animal cells or tissues. It is suitable for the preparation of animal soft tissue (liver or brain tissue) and hard tissue (muscle) and the nucleus of cultured cells. The preparation has high yield and can be used for research on apoptosis, signal transmission, metabolism and proteomics. The product does not contain contaminating proteases and ribozymes and has stable performance.

Kit Components:

1. Lysis Buffer: 100mL
2. Reagent A: 2.5mL
3. Medium Buffer: 25mL
4. Storage Buffer: 5mL

Catalog No.	521012
Size	50 preps / 100 preps
Product Category	Cell Isolation
Storage/Stability	2 ~ 8°C & -20°C/1 year
Shipping	Gel Packs
